

Additional allocations of Unlicensed spectrum will continue to foster innovation and delivery of competitive broadband services. With the upcoming WiMax products that already operate in the 3.5Ghz range, for use in Euro countries, the opening of this spectrum in the US would open up an immediate product line for American consumers. You can see the impact of unlicensed spectrum usage on companies and homes alike in both urban and rural areas. The economic advantages are ENORMOUS. Please continue to add to the unlicensed spectrum!

Thanks,
Bob Hrbek
